

stûv

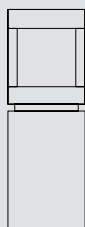

Pellets

The
essential
fire

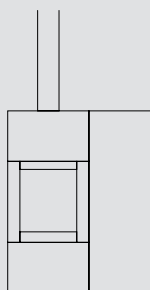

With the focus firmly on technology, Stûv's pellet stoves combine elegance, excellent performance and respect for the environment. They stand out thanks to the shape of their combustion chamber, built around one continuous line (ligne continue®), maximising your view of the fire. The quality of the generous, full flames and their radiation is comparable to that of a wood-burning fire. Their CO and fine particle emissions are virtually undetectable; their performance is exceptional. As well as these unique qualities, which are down to our patented technology, these stoves make no noise at all and are incredibly easy to use and maintain.

When you choose Stûv, you're reaping the rewards of impressive savoir-faire and innovative technology.

s[P10]

The sP10 really stands out from the crowd thanks to the two elements of its design. The combustion chamber makes up the top of the stove, using natural convection and radiation to provide the heat. It can be angled manually, and features a wide glass front, so there is always a beautiful view of the fire.

The sP10's technical features are fitted in the base, which comes in different steel and wood finishes. The stove can be pre-programmed and, once set up, can be controlled remotely.

s[P10]

[SIMPLE] Simplicity is the keyword when it comes to designing our products. This is true of their shape, installation, usage and maintenance. [UNIQUE]

Its bold look makes the sP10 an unusual model, turning it into a striking feature in any home.

[INNOVANT] The patented

“flower burner” system shapes the flames. The result is calm, sculptural, colourful and the perfect size, similar to the effect of burning logs. [SUSTAINABLE] The highly efficient combustion process generates negligible fine particle and CO emissions. Official tests have been carried out by independent specialist laboratories to prove this. [ERGONOMIC] The loading hatch, at the bottom of the device, means that pellets can be added at hip height. The ash pan has been designed for ease of use. [SILENT] The heat is distributed thanks to natural convection and radiation, so there is no blower noise. The pellets are loaded upwards, so they can't fall. [SMART] You can control the device remotely thanks to the Stûv app. It can also be controlled via an integrated display panel or an optional remote control. [AWARD-WINNING] The sP10 has won a Red Dot Award for Product Design, highlighting its technological, aesthetic, environmental and ergonomic qualities. It was chosen from 5,200 products from 57 countries.

**Bold and
effective**

When you choose Stûv, you get front-row seats for the beauty of your fire.

s[P20]B

The sP20-B is small but mighty. This low, slimline model still manages to incorporate a hopper capable of storing 32 kg of pellets, maximising its burn time.

The hot air is distributed thanks to natural convection. As an optional extra, the device can be fitted with a ductable convection kit that directs some of the heated air thanks to a fan with 4 power levels.

s[P20]S

The sP20-S really makes a mark even in large spaces. Its large curved glass amplifies the experience of the flames as well as the stove's radiation. It offers the benefits of an efficient pellet burner while producing a similar heat to that of a wood burner.

The sP20-S is a pleasure to use. It burns for up to 21 hours and the automatic de-ashing system keeps maintenance to a minimum. Both smart and monitored, it can be operated remotely.

FUNCTIONS

s[P20]

[SIMPLE] Simplicity is the keyword when it comes to designing our products. This is true of their shape, installation, usage and maintenance. [EFFICIENT] The sP20's energy efficiency is over 90% and its radiation is amplified thanks to its expansive glass surface. [INNOVANT] The

patented "flower burner" system shapes the flames. The result is calm, sculptural, colourful and the perfect size, similar to the effect of burning logs. [SUSTAINABLE] The highly efficient combustion process generates negligible fine particle and CO emissions. Official tests have been carried out by independent specialist laboratories to prove this. [ERGONOMIC] The sP20 loading system has been meticulously designed to make it easier to add the pellets. Both models incorporate a wide hatch. On the sP20-S, it is at the front, at chest height. On the sP20-B, it is at the top of the device, and comes with a bag. [LONG LASTING] The impressive burn time is thanks to the large hopper and ash pan. [SILENT] The heat is distributed thanks to natural convection and radiation, so there is no blower noise. The pellets are loaded upwards, so they can't fall. [SMART] The mobile app offers full remote control. Our monitoring system oversees the operating of your device safely, as well as any maintenance.
